SAFE provides integrated simulation-based analysis tools for the design, design optimization and optimization of building foundations, slab joints and floor and wall joints that are Earthquake Hazard Mitigation devices. SAFE i v12.3.1. SAFE is a software tailored for the engineering of elevated floor and foundation slab systems. Slab modeling, analysis, and design procedures . SAFE provides integrated simulation-based analysis tools for the design, design optimization and optimization of building foundations, slab joints and floor and wall joints that are Earthquake Hazard Mitigation devices. The aim of SAFE is to allow earthquake engineers to develop earthquake hazard mitigation for a variety of building types and scenarios. Advanced Building Structures v5.0. With the completion of the new Advanced Building Structures software, SimScale is now offering three modules that cover the full range of building engineering applications. These modules are: Structural Design and Analysis, Advanced Structural Finite Element Analysis (ASFÉ), and Geotechnical Engineering. Advanced Building Structures v5.0.2. With the completion of the new Advanced Building Structures software, SimScale is now offering three modules that cover the full range of building engineering applications. These modules are: Structural Design and Analysis, Advanced Structural Finite Element Analysis (ASFÉ), and Geotechnical Engineering. Advanced Building Structures v5.1. With the completion of the new Advanced Building Structures software, SimScale is now offering three modules that cover the full range of building engineering applications. These modules are: Structural Design and Analysis, Advanced Structural Finite Element Analysis (ASFÉ), and Geotechnical Engineering. Advanced Building Structures v5.2. With the completion of the new Advanced Building Structures software, SimScale is now offering three modules that cover the full range of building engineering applications. These modules are: Structural Design and Analysis, Advanced Structural Finite Element Analysis (ASFÉ), and Geotechnical Engineering. Advanced Building Structures v5.3. With the completion of the new Advanced Building Structures software, SimScale is now offering three modules that cover the full range of building engineering applications. These modules are: Structural Design and Analysis, Advanced Structural Finite Element Analysis (ASFÉ), and Geotechnical Engineering. Advanced Building Structures v5.4. With the completion of the new Advanced Building Structures software, SimScale is now offering three 82157476af
